The Pfizer Reports book contains 50 reports written by the highly-credentialed War Room/DailyClout Pfizer Documents Analysis Project volunteers between March and December 2022. The reports are based on information in the primary source Pfizer documents released under court order by the U.S. Food and Drug Administration, as well as on other key medical studies and literature that relate to Pfizer's experimental gene therapy mRNA COVID vaccine. These important documents have been ignored by the mainstream media; however, to date, no one has challenged the accuracy of what they report.

Now, for the first time, the 2022 Pfizer Reports are available in book format.
